

Order Picker Attachments

Order Picker Attachments - Order picking is otherwise referred to as order preparation operation. This is among the main processes in a warehouse and consists of people called order pickers, taking and collecting articles in a certain quantity before shipment in order to fulfill customer orders. Order picking is a basic warehousing method. The effectiveness in which this particular job is accomplished could be directly related to the productivity of a supply chain. Thus, order picking is one of the most controlled logistic methods. Order picking falls within the category of the warehouse management system.

There are some certain kinds of order picking. The main types include: pick to box method, wave picking method, piece picking or picker to part method, sorting systems method and zone picking method.

The pick to box method comprises the order picker filling the box with the items from her or his station. The box then moves to the other picking stations until the client order is done. In this particular method, there is no movement of the order picker staff. In the wave picking method, the order pickers move around to be able to gather the needed things for some orders. The piece picking or picker to part method is similar where the order picker or pickers move to collect the stuff required but for one order only.

In the sorting systems method, there is no movement of the order picking workers. Instead, the stuff are delivered to her or him by means of an automated system like for example a conveyor system or an automatic storage. In the zone picking method, every order picker is assigned to one specific zone. They are responsible for just realizing order picking within this particular area.
